

How V Workforce works

AI workers for small businesses — hired and run from the chat apps you already use.

What it looks like in the chat

What it is

V Workforce is a team of AI workers — each a specialist — that you message on LINE (WhatsApp support is coming soon). Hire a worker, send it a message, and it gets real work done. No app to install, no dashboard to learn.

Behind the chat is V, the orchestrator. V meets you, understands what you need, and routes you to the right specialist.

The team

- Iris — Personal assistant. Reads your inbox, schedules meetings, sends email.
- Maya — Sales. Live CRM pipeline, autopilot negotiation, one-tap signing.
- Ken — Legal. Drafts NDAs and agreements, flags risks, sends for e-signature.
- Alex — Accounting. Receipt OCR, live profit-and-loss, invoices into QuickBooks.
- Sherly — Growth. Finds and scores leads, drafts outreach, runs campaigns.
- (Nova — Security telemetry — is in preview.)

Getting started

1. Add the bot on LINE: @433fxwqh. (WhatsApp — AID Japan — is under development.)
2. Type “introduce” to meet the team.
3. Tap a worker’s card, or type “talk to iris” (or maya / ken / alex / sherly).
4. Then just type what you want, in plain English or Japanese.

Two ways to drive it

- Tap the buttons on a worker’s card for the common actions.
- Or just type naturally — the worker understands plain language and does the task directly. No forms.

Language

Everything works in English or Japanese. Pick your language at first contact, or type “日本語” / “English” to switch any time.

Pricing

- Each worker is a simple monthly subscription — Iris \$197, Maya \$297, Ken \$347, Alex \$247, Sherly \$197, Nova \$97. Cancel any time from a link in the chat.

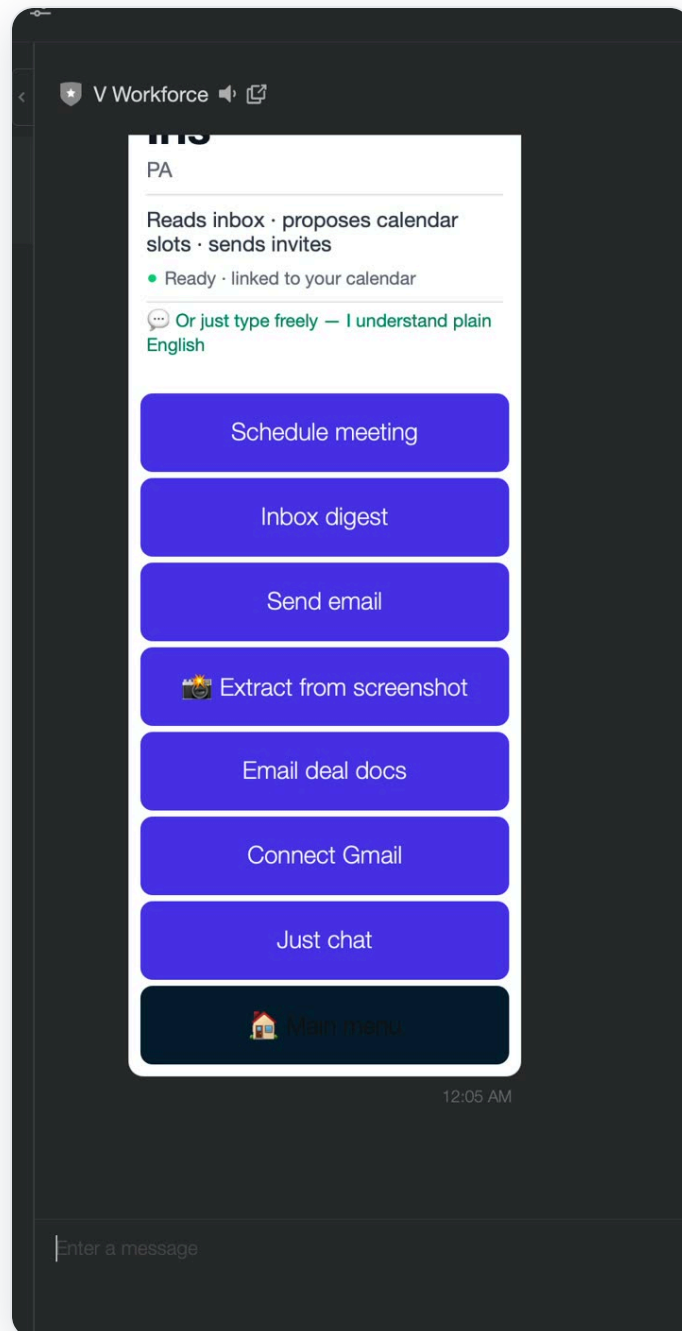

Your data

We hash your messaging id before logging, restrict outbound traffic to an explicit processor list, and let you delete everything at any time. See the Privacy Policy and User Data Deletion pages.

Iris — Personal Assistant **LIVE**

Reads your inbox, schedules meetings, and sends email — from a single chat message.

Connected to your Google Gmail & Calendar.

What it looks like in the chat

What she does

Iris is your front-desk assistant. She triages your real inbox, sends email on your behalf, and books real calendar events with a video link — all from plain-language messages. She also knows her teammates and will offer to hand work off (e.g. loop in Ken for a contract, forward receipts to Alex).

How to start

1. Type “talk to iris”, or tap Iris on the team carousel.
2. Her card shows “Ready · linked to your calendar” when Gmail/Calendar are connected.

show my inbox

send me a test email titled “Hello”

schedule a 30 minute meeting tomorrow at 3pm

who are my teammates?

Or tap a button

Inbox digest

Send email

Schedule meeting

Extract from screenshot

Connect Gmail

What's live **LIVE**

- Reads your real Gmail and produces a sorted digest (priority vs marketing).
- Sends real email — she already knows your address once Gmail is connected.
- Creates real calendar events with a Google Meet link and does the date math for you.
- Reads a screenshot of an invite and turns it into a calendar event (vision/OCR).

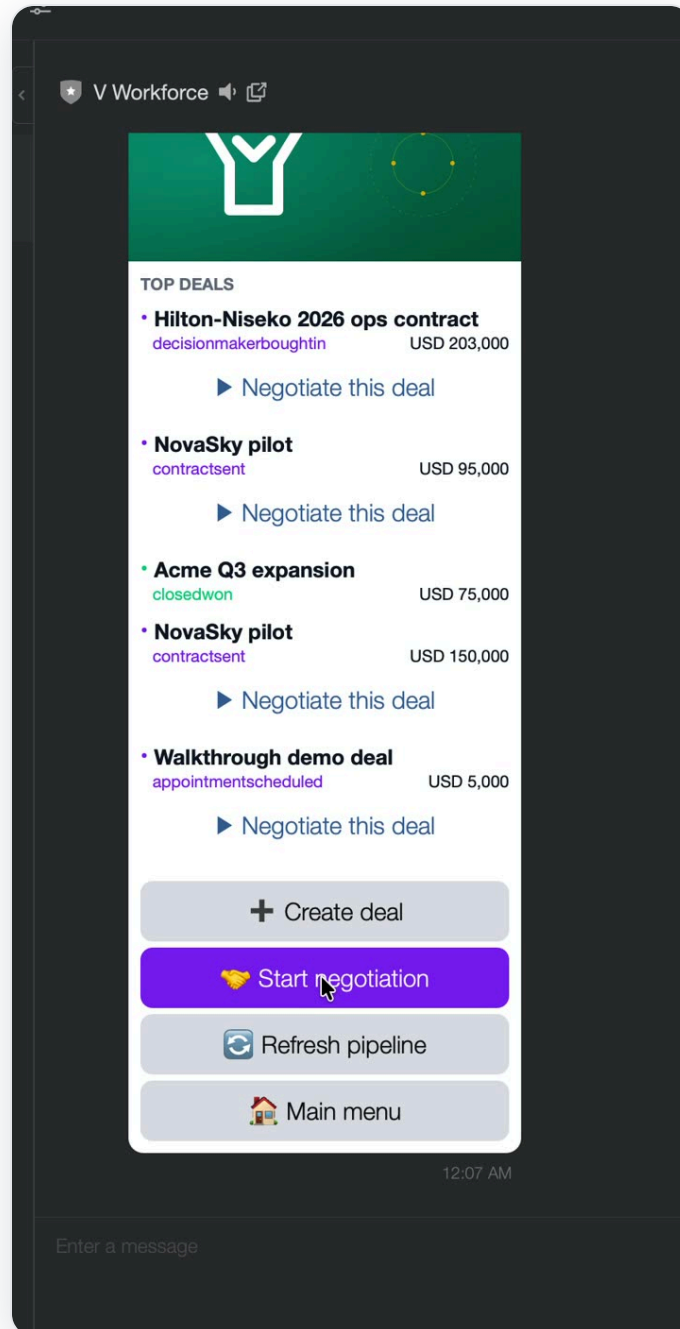

Tip

You don't need to fill out forms. Just describe the email or meeting in one sentence and Iris does it.

Maya — Sales **LIVE**

Live CRM pipeline, autopilot negotiation, and one-tap signing.

Connected to your HubSpot CRM. (Negotiation counterparty is simulated.)

What it looks like in the chat

What she does

Maya runs your sales motion. She shows your live CRM pipeline, creates deals, and can run a deal on autopilot — negotiating over several rounds, then handing a signed deal to Ken for the contract and to Alex for invoicing.

How to start

1. Type “talk to maya”, or tap Maya on the carousel.
2. Tap “Show pipeline” to see your live deals.

The autopilot

1. Tap “Start negotiation” — Maya runs a multi-round negotiation and converges on a price.
2. Tap “Tap to sign” — the deal locks, a signature is saved, and it’s handed to Ken automatically.
3. An invoice is generated and emailed, all without further taps.

Buttons

Create deal

Start negotiation

Send proposal

Warm leads from Sherly

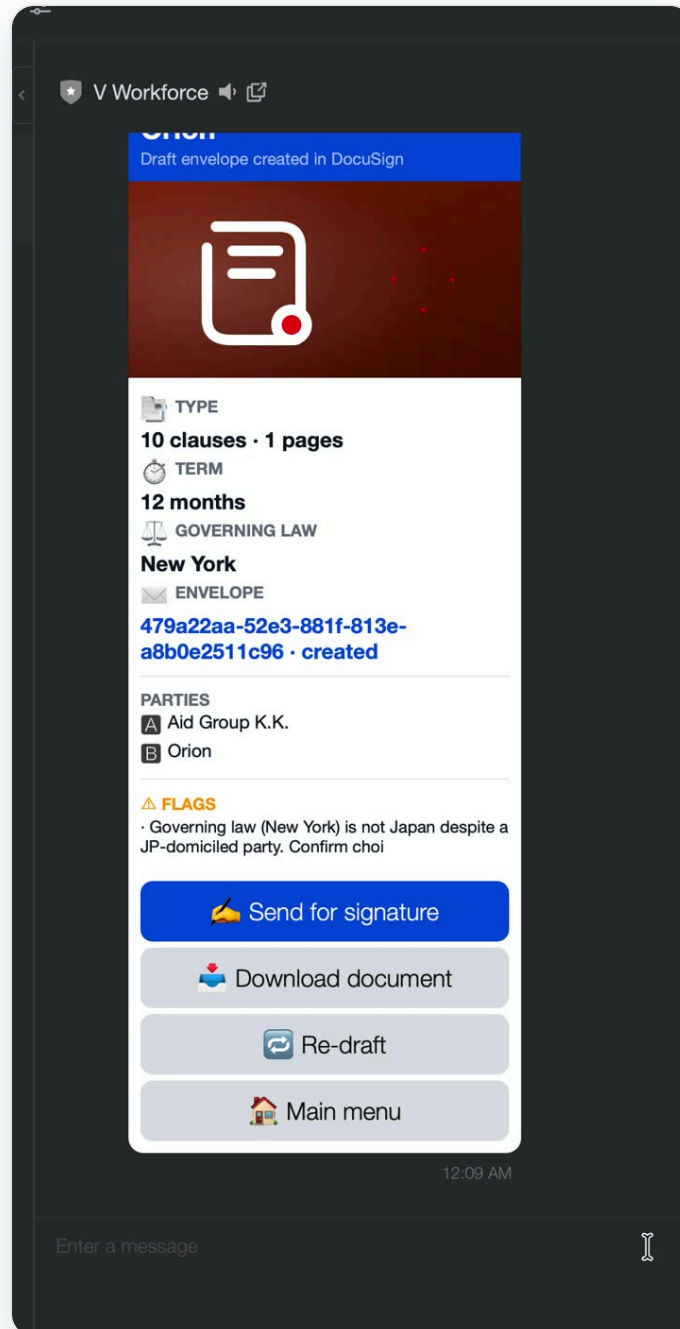

What's live **LIVE**

- Real HubSpot pipeline — your actual deals, stages and amounts.
- Real deal creation, written back to HubSpot.
- The negotiation runs against a simulated counterparty (the signing and CRM writes are real).

Ken — Legal & Contracts DEMO

Drafts NDAs and agreements, flags legal risks, and sends for e-signature.

DocuSign runs in sandbox/demo mode — real envelope API, no live signing partner.

What it looks like in the chat

What he does

Ken is your contracts paralegal. He drafts NDAs and agreements, packages them as a DocuSign envelope, and — importantly — flags legal risks on his own. When Maya closes a deal, Ken picks it up automatically with the counterparty and reference already filled in.

How to start

1. Type “talk to ken”, or arrive via a signed deal from Maya.
2. Tap “Draft contract / NDA”.

Example

- Draft NDA → a 10-clause, 12-month mutual NDA under the chosen governing law, packaged as a DocuSign envelope.
- Ken flags risks himself — e.g. “governing law is New York, but one party is Japan-based; confirm.”

Send for signature

Connect DocuSign

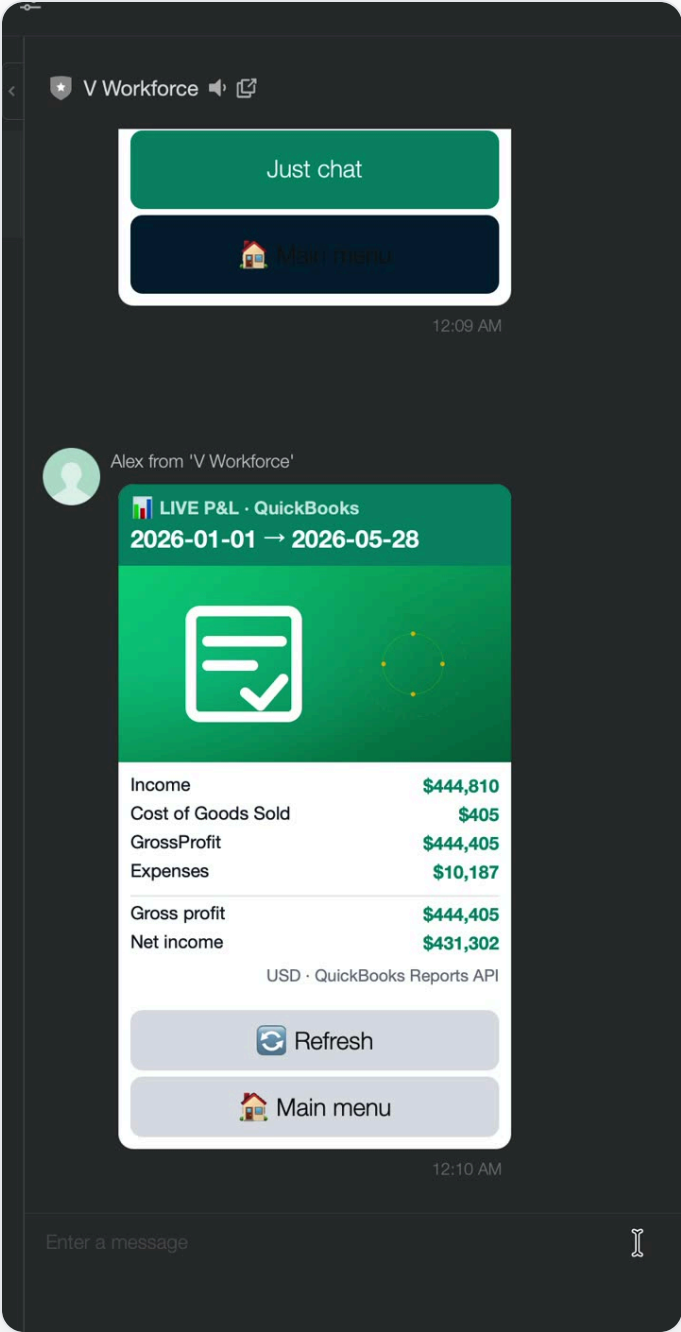

Note

Always review a contract before sending for signature. Ken drafts and flags, but you approve.

Alex — Accounting **LIVE**

Receipt OCR, live profit-and-loss, and invoices — straight into QuickBooks.

Connected to your QuickBooks. (Bank reconciliation via Plaid is coming.)

What it looks like in the chat

What he does

Alex keeps the books. Snap a photo of a receipt and he reads it with OCR and posts the journal entry to QuickBooks. Ask for the P&L and he pulls your live profit-and-loss from QuickBooks. He also drafts invoices.

How to start

1. Type "talk to alex", or tap Alex on the carousel.
2. Tap "Show P&L" for live numbers, or "Send receipt" to OCR a photo.

Buttons

Send receipt

Show P&L

Create invoice

Reconcile bank

What's live **LIVE**

- Live profit-and-loss pulled from the QuickBooks Reports API — real income, gross profit and net income.
- Receipt photos are OCR'd and posted as real journal entries.
- Bank reconciliation (Plaid) is coming next.

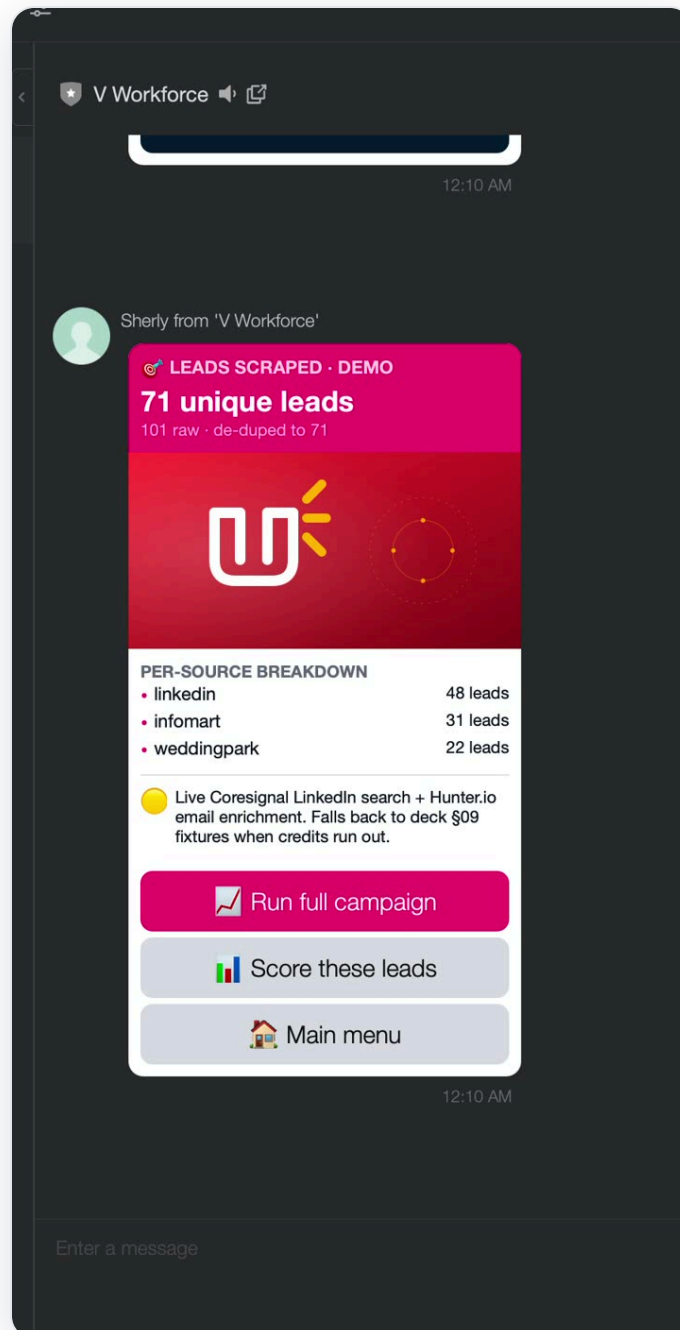

Tip

Just snap and send a receipt photo in the chat — no manual data entry.

Sherly — Growth & Leads LIVE

Finds and scores leads, drafts outreach, and runs email campaigns.

Email sending via SendGrid is live. Lead scraping falls back to sample data when API credits run out — and says so.

What it looks like in the chat

What she does

Sherly runs growth. She finds and de-duplicates leads, scores them, drafts personalised outreach, and sends real email campaigns. When she finds a warm lead she can hand it to Maya.

How to start

1. Type "talk to sherly", or tap Sherly on the carousel.
2. Tap "Find leads".

Example

- Find leads → scrapes and de-duplicates across sources (e.g. 101 raw down to 71 unique) with a per-source breakdown.
- When data credits are exhausted she falls back to sample data and labels it clearly — she never pretends a demo number is real.

Buttons

Find leads

Draft email

Show campaign

What's live vs demo

- Email campaigns send for real via SendGrid (LIVE).
- Live lead scraping is available when API credits exist; otherwise sample data is used (DEMO) and labelled.
